Theme 9 – Social Class & Socio-Economic Group

Population by Social Class

The entire population of persons aged 15 years and over is classified into one of seven social class groups which are defined on the basis of occupation. In determining social class no account is taken of the differences between individuals on the basis of other characteristics such as education. Accordingly social class ranks occupations by the level of skill required on a social class scale ranging from 1 (highest) to 7 (lowest). This scale combines occupations into six groups by occupation and employment status. The category "All others gainfully occupied and unknown" is used where no precise allocation is possible.
